# Welcome to the Novartis Pavillon

Located on Novartis Campus in Basel, it's a building where everyone can discover and engage with the life-changing power and potential of medicine.

This is a space to connect, explore, discuss and learn. A symbol of the ongoing evolution of Novartis Campus into an open home for life sciences.

## Explore the wonders of medicine

The building will be home to a permanent exhibition, "Wonders of Medicine." It will include interactive exhibits that let visitors explore how our bodies work, how researchers develop new medicines, and what the future of healthcare might look like.

Beyond the exhibition, there are even more spaces to gather and learn. A café that is open to the public, a spacious event room, and the School[Hub] – a complementary offering to the Novartis School[Lab] that engages early talents with life sciences through interactive experiences.

## A building where science, sustainability and technology meet

Novartis Pavillon was designed by AMDL CIRCLE and the Italian designer and architect Michele De Lucchi in collaboration with Blaser Architekten.

It's a design with sustainability and connection at its heart, combining natural materials, transparent surfaces, and technology to create a perfect environment for inspiring encounters.

The building's exterior also acts as a canvas for expression. The façade is covered by more than 30 000 roundshaped LED cores, powered by energy-generating solar panels – an intricate network that lights up to display large-scale artworks from a revolving roster of artists.
